

User Manual

HR / Administrator • Manager / Team Lead • Employee

Demo-ready guide • September 2026

Purpose

This guide explains the day-to-day use of the HRMS for HR/administrators, managers/team leads, and employees. The system centralizes employee records, department policies, attendance, leave, tasks, DPR, company calendar, KRA/performance, strikes, documents, reports, and ATS workflows.

Login and navigation

1. Open the HRMS login page.
2. Enter your work email and password.
3. If your account is newly activated, complete the activation/password setup flow.
4. Use the left sidebar to open the modules available to your role.
5. Use the notification bell for unread alerts and My Profile for your personal information.

Role access summary

- Employee: own attendance, To-Dos, DPR, leave, calendar, KRA, strikes, documents and profile.
- Manager / Team Lead: employee capabilities plus direct-report task assignment, DPR review, leave approval and team KRA visibility.
- HR / Admin: organization-wide employee master, departments, designations, policies, attendance/reporting, leave final processing, KRA configuration, strikes, documents, reports and ATS.

HR / Administrator Manual

1. Employee master

6. Open Employees.
7. Choose Add Employee for a new joiner or open an employee profile and select Edit employee.
8. Set name, work email, joining date, employment type/status, department, designation, reporting manager, location and salary fields as applicable.
9. The Designation list is filtered by the selected department.
10. Save the employee record.

Important: Designations are department-scoped. If a required designation is not available, create it first under Designations/Departments, then return to the employee record.

2. Create and manage designations

11. Open Designations or Departments.
12. Select the department.
13. Review existing designations.
14. Choose Add designation, enter the title, and save.
15. The new designation becomes selectable in Employee Master and KRA configuration.

3. Department policy

- Configure office start/end, lunch, check-in opening/cutoff, late threshold, half-day threshold and attendance penalties.
- Configure working weekdays and the Saturday pattern for each department.
- Department policies drive calendar, attendance, leave working-day calculations and KRA working-day context.

4. Leave administration

- HR does not need the employee-facing Apply Leave form for HR administration.
- Use HR Leave Management to review requests after manager approval, process final approval/rejection, inspect balances and review monthly leave data.
- Department leave policies control entitlement, notice, medical certificate, sandwich and probation rules.

5. Attendance and monthly totals

- Attendance is department-policy driven.
- The current late threshold is after 10:30 AM.
- The first two late arrivals in a month are allowed; 3 or more lates trigger a one-day monthly attendance deduction under the configured policy.
- Use monthly attendance to compare total working days, worked/effective days, lates, deductions and attendance rate.

6. KRA configuration and performance

16. Open KRA.
17. Select Department and Designation.
18. Review the saved role/KPI profile or paste a new role profile for a new designation.
19. Choose Generate & Save KRA to create/store measurable role metrics.
20. Daily KRA snapshots use attendance, tasks, DPR and available quality evidence.
21. At month-end, the system produces a final KRA score. Performance thresholds feed the strike workflow.

For demo verification, a 0% score means there is no measurable evidence for that calculation period or the evidence currently does not satisfy the configured metrics. UUID-like metric labels should not appear; metric names are resolved from the employee KRA template.

7. Birthday notifications

- Employees can maintain their Date of Birth in My Profile.
- On an employee birthday, the employee receives an in-app birthday wish.
- HR/Admin users receive an in-app reminder that the employee has a birthday.
- For controlled testing, HR/Admin can trigger the birthday sweep using the backend birthday-sweep endpoint. Duplicate birthday notifications are suppressed for the same year.

Manager / Team Lead Manual

1. Dashboard and team visibility

- Use Dashboard, Attendance, Team KRA and relevant reports to monitor direct reports.
- Manager access is scoped to the reporting hierarchy; HR-only master-data actions remain unavailable.

2. To-Dos

22. Open To-Dos.
23. Assign work to a direct report with due date/priority where needed.
24. Track progress and completion evidence.
25. Review output/blockers and task completion evidence as part of EOD performance.

3. DPR review

26. Open DPR.
27. Open a submitted DPR from a direct report.
28. Review task entries, hours, outputs, blockers, proof and quality context.
29. Approve when satisfactory, or request changes/reject with a clear review comment.
30. The employee can correct a Needs Changes/Rejected DPR and resubmit.

4. Leave approval

31. Open Leave approvals.
32. Review the employee request, dates, reason, policy impact and supporting documents where required.
33. Approve or reject at manager level.
34. Approved manager requests proceed to HR for final processing.

5. KRA and strikes

- View direct-report projected/final KRA scores.
- KRA combines recorded HRMS activity and role-specific metrics.
- Use scores as evidence for coaching; strikes are generated according to the configured performance policy, not as a substitute for manager review.

Employee Manual

1. My Profile

35. Open My Profile.
36. Update personal/contact fields such as first name, last name, personal email, phone, location and Date of Birth.
37. Choose Save changes.
38. Department and designation are employment master data and are maintained by HR.

2. Attendance

39. Open Attendance or use the dashboard attendance card.
40. Check in when starting work.
41. Complete your workday requirements.
42. Check out at the end of the day.
43. Review your monthly total working days, worked/effective days, late count and deductions.

Late status is determined from your department policy. Under the current policy, check-in is late only after 10:30 AM.

3. To-Dos and EOD

44. Open To-Dos.
45. Work on assigned or personal tasks.
46. Update completion status, actual effort and output/evidence.
47. Resolve EOD task status before submitting DPR.

4. DPR

48. Open DPR.
49. Review the entries auto-filled from your workday tasks.
50. Add/edit valid work details where allowed.
51. Submit the DPR.
52. If the manager requests changes or rejects it, correct the DPR and resubmit.

5. Leave

53. Open Leave.
54. Choose the leave type and dates.
55. Enter the required reason/emergency details and attach a medical certificate when policy requires it.
56. Submit the request.
57. Track manager approval and final HR processing from leave history.

6. Company Calendar

- The calendar follows your assigned department.
- Working Saturdays and weekends are determined by the department policy.

- Company holidays and optional holidays are shown separately.

7. KRA

- Open KRA to view your projected score, metric breakdown and daily snapshots.
- Scores are based on the KRA template linked to your designation and the evidence recorded in HRMS.
- At month-end, the score becomes final after the configured finalization process.

8. Notifications

- Use the bell icon for workflow alerts.
- On your birthday, the system sends a birthday greeting if your Date of Birth is saved.

Pre-demo verification checklist

Check	Expected result
Employee designation edit	HR can choose a designation for the selected department and save without UUID validation errors.
Employee DOB	Employee can add/edit DOB in My Profile; HR can also view/edit DOB in employee master.
Birthday sweep	Employee receives birthday wish; HR/Admin receives birthday reminder; no duplicates for same employee/year.
Department calendar	Employee calendar identifies department policy rather than organization default when department is assigned.
Late threshold	Check-in at or before 10:30 AM is not late; after 10:30 AM is late.
KRA labels	Metric names display instead of raw UUIDs.
KRA evidence	Daily calculation uses work-day tasks, completed tasks, due tasks, DPR and attendance evidence.
KRA zero state	0% is explained as insufficient/no measurable evidence rather than silently looking broken.

Operational notes

- Run Prisma migrations and Prisma generate after pulling schema/migration changes.
- Do not use prisma migrate reset on an existing demo/production database.
- After major role/profile data changes, log out and log back in if the frontend session caches old user context.
- Keep production secrets in environment variables and never commit real .env files.
