

HRMS User Manual — HR

HR Administration, Policies, Attendance, Leave, KRA and Employee Management

1. HR responsibilities

- Use HRMS to manage employees, departments, designations, working calendars, leave policies, attendance oversight, KRA configuration, reports and HR compliance.
- HR is not expected to submit an employee-style leave application. Employee leave is applied by the employee and follows Manager – HR processing.

2. Employee and designation setup

- Create or edit an employee and select the department first. The designation list is department-specific.
- Use the Designations page to add a new designation under the correct department. The new designation becomes available in Employee Master and KRA configuration.
- For HR's own profile, assign the appropriate department and designation so the HR calendar follows the same department policy.

3. Department calendar and policy

- Configure working weekdays, office hours, lunch, check-in window, late threshold, half-day threshold, absence cutoff, allowed lates and late penalties per department.
- Saturday policy is department-specific. The employee calendar is resolved from the employee's department rather than a global Saturday rule.
- The current attendance rule is late only after 10:30 AM. The first two monthly lates are allowed; reaching three or more lates applies the configured one-day deduction.

4. Leave management

- Review employee applications in HR Leave Management after manager processing.
- Maintain department leave rules, balances, medical-certificate requirements, advance notice and sandwich-leave settings.
- The system calculates working days using the employee's department calendar.

5. KRA and AI evaluation

- HR defines the role context once for a Department + Designation.
- For HR-provided roles, use the seeded KRA library based on the approved KRA sheet. For a new designation, enter the role scope/KPI context and use Generate & Save KRA.
- The system stores metric targets, weights, evidence sources and evaluation guidance. Metrics are evaluated automatically from recorded HRMS evidence.

- Evidence can include department-aware attendance, tasks, due dates, task AI analysis, DPRs, DPR quality reviews, comments, approved leave and ATS activity where available.
- The AI must not invent external activity. Missing external evidence lowers confidence and is recorded as a gap.
- Daily projected scores are stored automatically on working days. Month-end scoring evaluates the complete monthly evidence set and can feed the three-strike process.

6. Attendance and monthly reporting

- Use monthly attendance views to review worked days, total department working days, late count, late deductions, half days, absences and hours.
- If an employee checks in at or before 10:30 AM, the attendance should not be marked late under the current policy.

7. Recommended HR checks

- Before onboarding: department + designation + manager are correct.
- Before monthly KRA close: task/DPR evidence is complete and manager quality reviews are recorded.
- Before payroll/reporting: verify department calendar, approved leave, attendance deductions and effective working days.
