17. Risks & Mitigations
18. Success Metrics
19. Out of Scope (Phase 1–2)
20. Appendix: User Stories by Persona

1. Executive Summary

This plan defines a **production-grade HRMS** tailored to how your HR team actually works today:

#	HR Activity Today	System Module
1	Attendance tracking	Attendance Engine
2	DPR + To-Do maintenance	Work Hub (synced To-Do ↔ DPR)
3	Checking groups	Group Monitor
4	Candidate follow-ups	ATS: Candidate CRM
5	Hiring from Indeed, Naukri, etc.	ATS: Job Board Integrations
6	Month-end KRA reports	Performance Engine (auto-scored + 3-strike)

Core differentiator: Attendance, To-Do, and DPR are not three separate forms they share one **Work Day record** that syncs in real time. What you mark present, what you complete, and what you report at day-end are the same data, viewed differently.

2. Current HR Workflow (As-Is)

Pain points (inferred from current process)

Activity	Likely tools today	Problem
Attendance	Spreadsheet / biometric export / manual	Not linked to work output
DPR + To-Do	Separate sheets or WhatsApp	Double entry; DPR doesn't reflect actual tasks
Checking groups	WhatsApp / Teams manually	No audit trail; missed messages
Candidate follow-up	Email + spreadsheet	Leads fall through cracks
Job boards	Naukri/Indeed dashboards	Manual copy-paste of applicants
KRA	Excel at month-end	Subjective, late, no trend tracking

Target state

One system where HR opens a single dashboard and sees: who is in, who submitted DPR, which groups need attention, which candidates are stale, and who is at KRA risk : without switching tools.

3. Vision & Design Principles

3.1 Design principles

1. Single source of truth: Employee, attendance, tasks, DPR, and KRA data live in one database; no duplicate entry.
2. Sync by default: Completed to-dos roll into DPR; attendance gates DPR submission; KRA pulls from DPR + attendance + ATS metrics.
3. HR-first UX : Optimize for what HR does daily: check lists, follow-ups, approvals, reports.
4. Progressive complexity : Manual workflows first, automation second (e.g., manual KRA scoring before Jira auto-scoring).
5. PWA, not native : One codebase; mobile for check-in/DPR; desktop for HR dashboards.
6. Audit everything : Every approval, edit, and flag is logged (required for KRA/PIP decisions).

3.2 What “production level” means here

Area	Requirement
Security	RBAC, encrypted PII, session management, audit logs
Reliability	99.5% uptime target; queued offline actions for mobile
Scalability	500 employees, 50 concurrent users (headroom to 2,000)
Compliance	Data retention policies, export for audits, consent for GPS/liveness
Observability	Error tracking, job queue monitoring, integration health dashboard
Deploy	CI/CD, staging environment, database backups, rollback plan

4. System Overview

HRMS : Production Architecture

PWA Frontend (Next.js)

[Employee Portal] [Manager Portal] [HR Admin Console]
[Hiring Manager] [Reports & Alerts]

API Layer (REST + Webhooks)

Core Services

[Employee Master] [Attendance Engine] [Work Hub: ToDo+DPR] [Leave Engine]
[ATS + Boards] [KRA & 3-Strike] [Group Monitor] [Notify Service]

Integrations: Naukri . Indeed . Google Calendar . Email/SMS . Slack

Optional Phase 3+: Jira . GitHub . CRM . Biometric device API

PostgreSQL . Redis (cache/queue) . S3 (documents) . Background jobs

5. Module Specifications

5.1 Employee Management System (EMS)

5.1.1 Employee Master

Purpose: Foundation for every other module.

Feature	Detail
Employee profile	Name, email, phone, DOJ, department, designation, location, employment type (FT/PT/contract/intern)
Org hierarchy	Reporting manager, skip-level, department tree, project assignments
Employment lifecycle	Probation → confirmed → notice period → exited
Document vault	Offer letter, ID proofs, policies : versioned, role-based access
Employee self-service	Update contact info, download payslip placeholder, view policies

Why first: Without this, attendance, leave, DPR, and KRA have no owner.

5.1.2 Attendance Engine

Purpose: Replace manual attendance with policy-aware, multi-mode tracking.

Mode	Who	How
Web check-in/out	Remote / office	Browser + optional IP allowlist
Mobile check-in	Field / hybrid	GPS + timestamp; geofence optional
Biometric import	On-site	CSV/API import from device (Phase 2)
Auto-absence	All	No check-in by cutoff → flagged absent

Feature	Detail
Shift policies	Fixed, flexible (core hours 12–4 PM), rotating (support)
Regularisation	Employee requests fix → manager approves
Dashboards	Today's presence by team; late/early; WFH vs office
Sync link	Attendance status gates DPR : cannot submit DPR without check-in (configurable)

5.1.3 Leave Management

Feature	Detail
Leave types	CL, SL, EL, WFH, unpaid, maternity/paternity, comp-off
Accrual rules	Monthly/quarterly accrual, carry-forward caps
Approval flow	Employee → Manager → HR (with delegation)

Feature	Detail
Calendar	Company holidays + team leave heatmap
Reconciliation	Approved leave auto-marks attendance; conflicts flagged

5.1.4 Work Hub : To-Do + DPR (Synced)

This is the heart of the system. See Section 6 for full sync logic.

To-Do features:

Feature	Detail
Personal tasks	Title, project, priority, due date, estimated hours, status
Team tasks	Manager assigns to reports; visible on team board
Templates	Dev, designer, PM, HR role templates
Reminders	Push/email for due today / overdue
Bulk actions	Mark complete, reschedule, reassign

DPR features:

Feature	Detail
Auto-fill	Completed to-dos → DPR line items (editable)
Multi-project	One DPR, multiple project sections
Fields per entry	Task, hours, output/deliverable, blocker, tomorrow plan
SLA	Submit by configurable time (default 10 PM); reminders at 6 PM, 8 PM
Review	Manager/TL approves, requests revision, or comments
Quality score	HR can rate DPR completeness (feeds KRA)

5.1.5 Document & Policy Management

Feature	Detail
Policy library	HR uploads; employees acknowledge
Offer/onboarding docs	Tied to employee lifecycle
Expiry alerts	ID/document renewal reminders

5.2 Group Monitoring (“Checking Groups”)

Purpose: Replace manual WhatsApp/Teams group checking with a structured hub.

Full WhatsApp Business API integration is expensive and restricted. This module uses a practical hybrid approach that HR can adopt immediately.

Phase 1 : Structured group registry (buildable now)

Feature	Detail
Group registry	Register each team/project group: name, platform (WhatsApp/Teams/Slack), link, owner, members
Daily checklist	HR marks groups “checked” with timestamp + optional notes
Escalation log	Flag issues found (e.g., “Sprint-5 group : no standup post by 11 AM”)
Member sync	Cross-check group members vs employee master → flag ex-employees still in groups
Alerts	Notify group owner if check missed by SLA

Phase 2 : Platform integrations (optional)

Platform	Integration approach
Slack	Bot reads channel activity; posts summary to HR dashboard
Microsoft Teams	Graph API : channel message counts, @mentions
WhatsApp	Manual check-in only OR WhatsApp Business API (if budget allows)

HR dashboard widget: “Groups pending check (3)” with one-click mark-done.

6. The Attendance ↔ To-Do ↔ DPR Sync Engine

This is the most important technical design in the plan. Getting this right eliminates double entry for HR.

6.1 Concept: The Work Day

Every employee has one WorkDay record per calendar date:

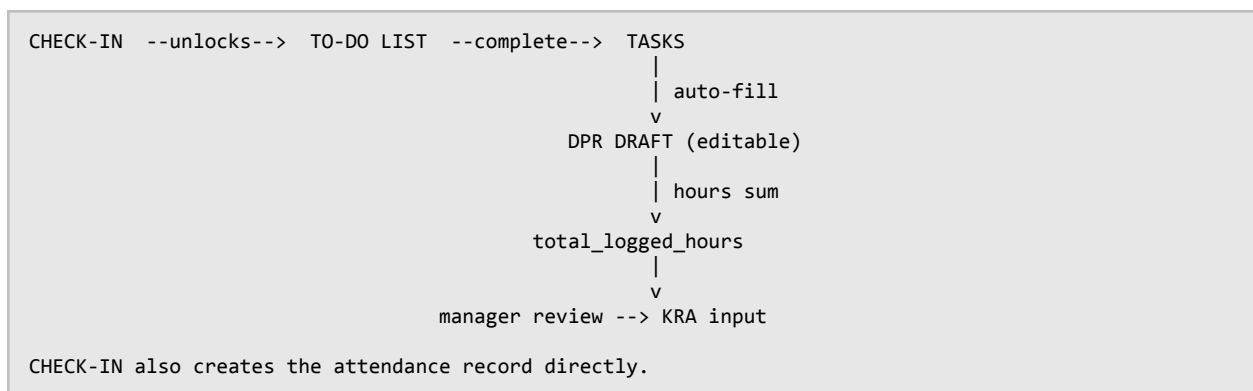

```
WorkDay {
  employee_id
  date
  attendance_status    // present | absent | leave | wfh | half_day
  check_in_at
  check_out_at
  todos[]             // linked tasks for this day
  dpr_id              // null until submitted
  dpr_status          // draft | submitted | approved | revision_requested
  total_logged_hours  // computed from todos + manual DPR entries
}
```

6.2 Sync rules

Event	System behavior
Employee checks in	WorkDay created/updated → to-do list for today unlocked
To-do marked complete	Auto-adds line item to draft DPR with hours + description

Event	System behavior
To-do hours updated	Draft DPR hours recalculated
Employee opens DPR	Pre-filled from completed to-dos; can add manual entries
DPR submitted	Locks to-do edits for that day (configurable); notifies manager
No check-in by 12 PM	Alert to employee + manager; DPR submission blocked (configurable)
Leave approved	WorkDay marked leave; DPR not required
DPR not submitted by SLA	Escalation alert to employee → manager → HR

6.3 Sync flow

6.4 Conflict handling

Scenario	Resolution
To-do hours ≠ DPR hours	Flag discrepancy; employee must reconcile before submit
Task completed but not in DPR	Warning: “2 completed tasks not in DPR”
DPR submitted with no to-dos	Allowed but flagged low-quality for KRA
Edit after DPR approved	Requires manager unlock

7. Applicant Tracking System (ATS)

7.1 Job requisition workflow

Hiring Manager raises req -> HR review -> Finance/Leadership approval -> Job published	
Field	Detail
Role title	e.g., Senior React Developer
Department / project	Which team/project slot

Skills, seniority	Required skills, years, certifications
CTC range	Budget band
Positions	Headcount
JD	Rich text + attachments

7.2 Candidate pipeline

Default stages (configurable per role):

Sourced -> Applied ->
Resume Screen -> HR
Screen -> Technical Round
->
Manager Round -> Offer ->
Joined -> Rejected (with
reason)

Feature	Detail
Candidate profile	Resume, contact, source, current stage, scorecards
Activity timeline	Every call, email, interview, note : timestamped
Follow-up tasks	Auto-created: "Follow up with Raj : no response in 3 days"
Stale candidate alert	No activity in X days → HR notification
Duplicate detection	Match by email/phone across sources
Bulk actions	Move stage, send template email, assign recruiter

7.3 Job board integrations (Indeed, Naukri, etc.)

Reality check: Naukri and Indeed do not offer full bidirectional ATS APIs for SMBs. Production approach uses a tiered integration strategy.

Tier 1 : Manual import (Phase 1, week 1)

Feature	Detail
CSV/Excel import	Upload candidate export from Naukri/Indeed/LinkedIn
Source tagging	Auto-tag source platform from import metadata
Duplicate merge	On import

Tier 2 : Email parsing (Phase 2)

Feature	Detail
Dedicated inbox	jobs@yourcompany.com
Auto-parse	Incoming application emails → create candidate record
Attachment extract	Parse resume PDF for name, email, phone

Tier 3 : Platform APIs (Phase 3, where available)

Platform	Integration
Naukri Recruiter	Job post sync + applicant pull (requires Naukri Recruiter subscription + API access)
Indeed	Indeed Apply webhook (requires employer account setup)
LinkedIn	Manual + CSV; LinkedIn Recruiter API if licensed
Careers page	Built-in public job listing + apply form (always available)

Built-in careers page (recommended): Host your own /careers page : every application lands directly in ATS. Reduces dependency on paid board APIs.

7.4 Interview scheduling

Feature	Detail
Calendar sync	Google Calendar / Outlook : send invites from ATS
Panel assignment	Define interviewers per stage
Scorecards	Structured feedback forms per round
Reminders	Auto-remind interviewers to submit feedback within 24h

7.5 Offer & onboarding handoff

Step	Detail
Offer generation	Template-based offer letter (PDF)
Approval	HR + Finance sign-off
Accept/decline	Candidate portal link
On join	Auto-create employee record in EMS; trigger onboarding checklist

8. Month-End KRA & 3-Strike Engine

8.1 KRA templates by role

Role	KRA dimensions	Primary data source
All employees	Attendance compliance, DPR submission rate & quality	Attendance + DPR modules
Developer	Task completion, timeliness, collaboration	To-Do + DPR
Tech Lead	Team delivery, code review participation	DPR + manual input
Project Manager	Milestone adherence, stakeholder updates	DPR + manual input

Role	KRA dimensions	Primary data source
HR	Hiring TAT, candidate follow-up SLA, group check compliance	ATS + Group Monitor
Sales/BD (Phase 3)	Pipeline, revenue, activity	CRM integration

8.2 Scoring model

Monthly KRA Score = Sum (KRA_weight x KRA_achievement_percent)

Example -- Developer:

DPR submission (20%) -> 100% if all days submitted on time
Task completion (30%) -> completed / assigned x 100
Attendance (20%) -> present days / working days x 100
DPR quality (15%) -> avg manager rating
Collaboration (15%) -> manual manager score

8.3 Auto vs manual scoring (phased)

Phase	What's automated	What's manual
Phase 1	DPR submission %, attendance %, task completion %	Manager scores collaboration, quality
Phase 2	DPR quality avg, hiring TAT (HR role)	Architecture/design scores
Phase 3	Jira velocity, PR metrics	Appraisal narrative

8.4 Three-strike rule

Config	Default
Threshold	Monthly score < 80% = 1 strike
Window	Rolling 6 months
Trigger	3 strikes in window
Actions	Flag employee → notify manager + HR → optional PIP task created
Dashboard	HR sees: 0-strike (green), 1 (yellow), 2 (orange), 3+ (red)

8.5 Month-end report (HR deliverable)

Auto-generated PDF/Excel on last working day:

- Team-wise KRA summary
- Top / bottom performers
- 3-strike list with history
- Attendance + DPR compliance appendix
- Hiring funnel summary (from ATS)
- Group check compliance (from Group Monitor)

HR reviews → approves → publishes to managers. **No manual Excel assembly.**

9. Group Monitoring & Communication Hub

See Section 5.2. Summary for HR daily workflow:

Morning routine (15 min → 5 min):

1. Open HR dashboard
2. See: “4 groups unchecked, 2 candidates stale, 3 DPRs missing from yesterday”
3. Click through each → mark done / assign follow-up
4. Done

10. Roles & Permissions (RBAC)

Role	Access
Employee	Own attendance, to-dos, DPR, leave, view own KRA
Manager / TL	Team attendance, DPR review, to-do assign, leave approve, view team KRA, hiring feedback
HR Admin	All employees, ATS full, group monitor, KRA config, reports, document vault
Hiring Manager	Own reqs, candidate pipeline, scorecards, offer approval
Finance	Requisition budget approval, offer CTC approval
Leadership	Read-only dashboards, org-wide reports
Super Admin	System config, integrations, RBAC management

11. Integrations

Phase 1 (required)

Integration	Purpose
Email (SMTP/SendGrid)	Notifications, application parsing
Google Calendar	Interview scheduling
CSV import/export	Naukri/Indeed candidate import, report export

Phase 2

Integration	Purpose
Slack / Teams	Alerts, optional group activity
SMS (Twilio/MSG91)	DPR reminders, interview reminders

Integration	Purpose
Biometric device	CSV/API attendance import

Phase 3 (optional)

Integration	Purpose
Naukri / Indeed API	Automated job post + applicant sync
Jira / Azure DevOps	Task import, velocity for KRA
GitHub/GitLab	PR metrics for dev KRA
CRM	Sales attendance + revenue KRA

12. Technical Architecture

12.1 Recommended stack

Layer	Choice	Why
Frontend	Next.js 14+ (App Router)	SSR, PWA support, fast iteration
UI	Tailwind + shadcn/ui	Consistent, accessible components
Backend	Node.js + NestJS OR Django	Modular services, good RBAC libraries
Database	PostgreSQL	Relational integrity for HR data
Cache/Queue	Redis + BullMQ	Background jobs: reminders, KRA calc, imports
File storage	S3 / Cloudflare R2	Resumes, documents, offer letters
Auth	JWT + refresh tokens; optional SSO (Google) later	Standard, secure
Hosting	AWS / Railway / Render	Staging + production environments
Monitoring	Sentry + uptime check	Error tracking

12.2 Background jobs (critical for production)

Job	Schedule	Purpose
DPR reminder	6 PM, 8 PM daily	Push/email employees
DPR escalation	10:30 PM daily	Notify manager of missing DPRs
Stale candidate check	Daily 9 AM	ATS follow-up tasks
Group check reminder	Daily 10 AM	HR group monitor
KRA pre-calculation	25th of month	Mid-month risk alert
KRA finalization	Last working day	Generate month-end report

Job	Schedule	Purpose
Leave accrual	1st of month	Update balances
Strike evaluation	1st of month	Evaluate 3-strike rule

12.3 API design

REST API with consistent patterns:

```

/api/v1/employees
/api/v1/attendance
/api/v1/leave
/api/v1/todos
/api/v1/dpr
/api/v1/work-days      <- sync hub
/api/v1/candidates
/api/v1/jobs
/api/v1/kra
/api/v1/groups
/api/v1/reports
/api/v1/notifications

```

Webhooks for external systems (Phase 2+):

```

POST /webhooks/indeed-apply
POST /webhooks/naukri-applicant
POST /webhooks/calendar-event

```

13. Data Model (Core Entities)

```

Organization
  -> Department
    -> Employee
      - WorkDay (1 per day) <- sync hub
      - AttendanceRecord
      - TodoItem[]
      - DPR -> DPREntry[]
      - LeaveBalance
      - LeaveRequest
      - Document[]
      - KRAScore[] (monthly)

JobRequisition
  -> JobPosting
    -> Candidate
      - CandidateActivity[]
      - Interview[]
      - Scorecard[]
      - Offer

CommunicationGroup
  - GroupMember[]
  - GroupCheckLog[]

KRATemplate -> KRAItem[] (weighted)
ThreeStrikeRecord
Notification
AuditLog

```

Key relationship: WorkDay is the join entity that makes Attendance ↔ To-Do ↔ DPR sync possible. Never store these as independent silos.

14. Phased Delivery Plan

Phase 0 : Foundation

Goal: Auth, employee master, basic admin.

Deliverable	Detail
Project scaffold	Next.js + API + PostgreSQL + CI/CD
Auth & RBAC	Login, roles, password reset
Employee CRUD	Add/edit/deactivate employees, org hierarchy
Admin dashboard shell	Navigation, empty widgets

Exit criteria: HR can onboard employees and assign managers.

Phase 1 : Daily Operations: MVP

Goal: Replace spreadsheets for attendance, to-do, DPR, leave.

Deliverable
Attendance check-in/out (web + mobile PWA)
To-Do module (personal + team assign)
WorkDay sync engine : to-do → DPR auto-fill
DPR submit, manager review, SLA reminders
Leave apply + approve + calendar
HR dashboard: attendance, DPR compliance, leave overview
Bug fixes, UAT with HR, production deploy

Exit criteria:

- Employees check in and submit DPR from one synced flow
- HR sees daily compliance dashboard
- Leave fully self-service

Phase 2 : ATS + Group Monitor + KRA

Goal: Hiring pipeline, group checks, month-end KRA.

Deliverable
Job requisition + careers page
Candidate pipeline + activity log + follow-up tasks
CSV import (Naukri/Indeed exports) + email apply parsing
Interview scheduling + scorecards
Group registry + daily check workflow
KRA templates + auto-scoring (attendance, DPR, tasks)
3-strike engine + month-end report generation
UAT, HR training, production hardening

Exit criteria:

- HR manages candidates without spreadsheet
- Month-end KRA report auto-generated
- Group checks tracked with audit trail

Phase 3 : Integrations & Intelligence

Goal: Reduce manual work further.

Deliverable	Detail
Naukri/Indeed API (if licensed)	Auto-sync applicants
Slack/Teams alerts	DPR, candidate, KRA notifications
Jira task import	Dev to-dos from assigned tickets
Biometric import	Device CSV/API
Advanced analytics	Hiring funnel, attrition risk, utilisation
PIP workflow	Full performance improvement plan module

Phase 4 : Scale & Polish

Deliverable	Detail
SSO (Google Workspace)	Enterprise login
Mobile native shell (optional)	If PWA limits hit
CRM + sales KRA	Revenue-linked performance
OKR cascading	Company → team → individual
Custom report builder	Self-serve analytics for leadership

15. Production Readiness Checklist

Before go-live after Phase 1:

Security

- ☐ HTTPS everywhere
- ☐ Password hashing (bcrypt/argon2)
- ☐ RBAC enforced on every API endpoint
- ☐ PII fields encrypted at rest
- ☐ Rate limiting on auth endpoints
- ☐ Audit log for sensitive actions

Reliability

- ☐ Database daily backups with tested restore
- ☐ Background job failure alerts
- ☐ Graceful degradation if email service down
- ☐ PWA offline queue for check-in/DPR draft

Data

- ☐ Employee data migration plan (from spreadsheets)
- ☐ Data validation on import
- ☐ Soft delete (no hard delete of HR records)

Operations

- ☐ Staging environment mirroring production
- ☐ CI/CD pipeline (test → staging → prod)
- ☐ Error monitoring (Sentry)
- ☐ Runbook for common issues

Legal / HR policy

- ☐ GPS/liveness consent for mobile check-in
- ☐ Data retention policy documented
- ☐ KRA/3-strike policy signed off by leadership
- ☐ Offer letter templates reviewed by legal

16. Team, Timeline & Budget Estimate

Minimum viable team

Role	Allocation	Responsibility
Full-stack engineer	1 FTE	Backend API, database, jobs
Frontend engineer	1 FTE	PWA, dashboards, mobile flows
Full-stack engineer (senior)	0.5 FTE	Architecture, code review, DevOps
Product/HR liaison	0.25 FTE	UAT, requirements, HR training
Designer	0.25 FTE	UI for employee + HR flows

Timeline summary

Phase	Duration	Cumulative
Phase 0 : Foundation	3 weeks	Week 3
Phase 1 : MVP (daily ops)	9 weeks	Week 12
Phase 2 : ATS + KRA	12 weeks	Week 24
Phase 3 : Integrations	12 weeks	Week 36

Infrastructure cost (monthly, production)

Item	Estimate (USD)
Hosting (API + DB + Redis)	\$50–150
S3 storage	\$5–20
Email (SendGrid)	\$15–50
SMS (optional)	\$10–30
Sentry	Free tier → \$26
Domain + SSL	\$10
Total	~\$100–300/month

Job board API fees (Naukri Recruiter, Indeed) are separate subscription costs.

17. Risks & Mitigations

Risk	Impact	Mitigation
HR resists new tool	Low adoption	Phase 1 mirrors current workflow; train early; HR co-designs dashboards
Naukri/Indeed API unavailable	Manual import only	Built-in careers page + CSV import from day one
DPR sync too rigid	Employee frustration	Allow manual DPR entries; sync is assist, not lock (configurable)
KRA scoring feels unfair	Trust issues	Start with transparent auto-metrics; manager override with audit
Scope creep	Delayed delivery	Strict phase gates; Phase 1 does NOT include ATS or KRA
Biometric integration complexity	Delayed attendance	Web/mobile check-in first; biometric as import-only Phase 3
WhatsApp group integration blocked	Feature gap	Structured manual check-in works; Slack/Teams in Phase 2

18. Success Metrics

Phase 1 (MVP)

Metric	Target
Daily check-in rate	> 95%
DPR submission (on-time)	> 90% within 8 weeks of launch
Leave on spreadsheet	0
HR time on attendance/DPR	–50% vs manual

Phase 2 (ATS + KRA)

Metric	Target
Candidate response follow-up	100% within 3-day SLA
Month-end KRA report generation	< 1 hour HR effort (vs 2–3 days manual)
3-strike accuracy	Zero false positives in first 3 cycles
Group check compliance	> 95% daily

Long-term

Metric	Target
Employee self-service rate	> 80% of HR requests without HR intervention
Time-to-hire	–30% vs baseline
Unresolved attendance exceptions	< 2%/month

19. Out of Scope (Phase 1–2)

To keep delivery realistic, these are explicitly not in the first two phases:

- Payroll processing
- Full biometric hardware integration
- Full WhatsApp Business API
- 360° feedback / appraisal cycles
- OKR cascading
- Expense management
- Asset management
- Learning management system (LMS)
- Native iOS/Android apps

20. Appendix: User Stories by Persona

HR Admin

#	Story	Phase
H1	As HR, I want a daily dashboard showing attendance, missing DPRs, unchecked groups, and stale candidates so I can prioritize my morning.	1–2
H2	As HR, I want to import candidates from Naukri/Indeed CSV so I don't re-type applications.	2
H3	As HR, I want month-end KRA reports auto-generated so I stop building Excel files manually.	2
H4	As HR, I want to mark communication groups as checked with notes so there is an audit trail.	2
H5	As HR, I want follow-up tasks auto-created for candidates with no activity in 3 days.	2

Employee

#	Story	Phase
E1	As an employee, I want to check in once and see my to-do list for the day so I don't use separate tools.	1

#	Story	Phase
E2	As an employee, I want completed to-dos to auto-fill my DPR so I don't write the same thing twice.	1
E3	As an employee, I want DPR reminders before the 10 PM deadline so I don't forget.	1
E4	As an employee, I want to apply for leave and see my balance without emailing HR.	1

Manager

#	Story	Phase
M1	As a manager, I want to review and approve DPRs from my team in one screen.	1
M2	As a manager, I want to assign to-dos to my team and see completion status.	1
M3	As a manager, I want to see team KRA scores and who is at strike risk.	2
M4	As a hiring manager, I want to move candidates through stages and submit interview feedback.	2
