

HRMS User Manual — Employee

Daily attendance, tasks, DPR, leave, calendar and KRA

1. Daily workflow

- Check in during the configured attendance window.
- Work on assigned To-Dos and keep task status, outputs, blockers and completion evidence updated.
- Complete the daily DPR from your WorkDay and submit it within the configured SLA.
- Check out at the end of the day. Employees may be required to complete the DPR/EOD flow before checkout.

2. Attendance

- The current late threshold is after 10:30 AM.
- The first two monthly lates are allowed. When the monthly late count reaches three or more, the configured one-day deduction is applied.
- Your monthly attendance reflects the working days defined by your department calendar.

3. Calendar

- Your calendar follows your assigned department.
- Saturday working/off status is therefore determined by your department's policy. Sunday is non-working unless HR configures otherwise.
- If your department or designation changes, your calendar and KRA context follow the updated employee profile.

4. To-Dos and DPR

- Record meaningful work in To-Dos. Include a clear completion output and proof when required.
- DPR entries are linked to the day's WorkDay and can be auto-filled from resolved To-Dos.
- Managers review submitted DPRs. If changes are requested, edit the DPR and resubmit.

5. Leave

- Apply leave with the required reason and contact information. Follow the configured advance-notice and medical-certificate rules.
- Leave follows Employee → Manager → HR processing.
- Approved leave and the department calendar are used in working-day calculations.

6. KRA

- You do not manually calculate your KRA score.
- The system collects your recorded attendance, tasks, task AI analysis, DPRs, outputs, manager-reviewed quality and other supported HRMS activity.
- The AI evaluates each metric against its saved target and weight. Daily scores are projected; the month-end score uses the full monthly evidence set.
- If evidence is missing, the system should show a gap rather than assume the work happened.
